

# Mono alphabetic substitution cipher

Consider we have the plain text “cryptography”. By using the substitution table shown below, we can encrypt our plain text as follows

Plain	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s	t	u	v	w	x	y	z
Cipher	J	I	B	R	K	T	C	N	O	F	Q	Y	G	A	U	Z	H	S	V	W	M	X	L	D	E	P

one permutation of the possible 26!

plain text : c r y p t o g r a p h y  
cipher text : B S E Z W U C S J Z N E

Hence we obtain the cipher text as “BSEZWUCSJZNE”

# Mono alphabetic substitution cipher- cryptanalysis

Consider we have the following cipher text

“LMCOTKOMSFKSWIMCQTGAUECTGKTGWFEZEWISKKTWG  
VGWLLSDDOMCOTMCQSTOTGNSOWNCVSNRGCNSICN  
WFKGWNCGDTQSKWEMCKSQSEDTQSYLMWMCKUEWFA  
MOOMSKCN SCN WFGOWIKOFYRCGYWIGCOFECDOCD SGO  
OWOMSYSOSJOTWGWIJETNSLMTJMTMCQSYWGSCGYLM  
COTKOMSESKFDOOMSESTKGWJETNSOWYSOSJO”

A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
2	0	20	7	11	8	17	0	6	5	14	6	17	10	24	0	6	2	28	18	2	2	20	0	7	1

Number of occurrences of each alphabet in the given cipher text

# Mono alphabetic substitution cipher- cryptanalysis

Frequencies of occurrence of each alphabet in an english text

th	he	an	re	er	in	on	at	nd	st	es	en	of	te	ed
168	132	92	91	88	86	71	68	61	53	52	51	49	46	46

Most common English bigrams (frequency per 1000 words)

# Mono alphabetic substitution cipher- cryptanalysis

In the given cipher, we observe that 'S' has the highest count followed by 'O' Hence we make the substitutions S=e and O=t. Similarly we have C=a, W=o and T=l

“LMatiKtMeFKeolMaQiGAUEaiGKiGoFEZEoleKKioG  
iVGoLLeDDtMatiMaQeitiGNetoNaVeNRGaNelaN  
oFKGoNaGDiQeKoEMaKeQeEDiQeYLMoMaKUEoFA  
MttMeKaNeaNoFGtoIKtFYRaGYoIGatFEaDtaDeGt  
totMeYeteJtioGoJJEiNeLMiJMiMaQeYoGeaGYLM  
atiKtMeEeKFDttMeEeiKGoJJEiNetoYeteJt”

In the above text we observe many trigrams 'tMe' which would be 'the' and so we can use M=h and obtain the new text as follows

# Mono alphabetic substitution cipher- cryptanalysis

“LhatiKtheFKeolhaQiGAUEaiGKiGoFEZEoleKKioG  
iVGoLLeDDthatihaQeitiGNetoNaVeNRGaNelaN  
oFKGoNaGDiQeKoEhaKeQeEDiQeYLhohaKUEoFA  
httheKaNeaNoFGtoIKtFYRaGYoIGatFEaDtaDeGt  
to the YeteJtioGoIJEiNeLhiJhihaQeYoGeaGYLh  
atiKtheEeKFDttheEeiKGoJEiNetoYeteJt”

We find ‘Lhat’ at 2 places which can be guessed to be  
‘what’ and so we know that L=w. We make these  
substitutions in our text

# Mono alphabetic substitution cipher- cryptanalysis

“ what iK the FKeolhaQiGAUEaiGKiGoFEZEoleKKioG  
iVGowweDDthatihaQeitiGNetoNaVeNRGaNelaN  
oFKGoNaGDiQeKoEhaKeQeEDiQeYwhohaKUEoFA  
httheKaNeaNoFGtoIKtFYRaGYoIGatFEaDtaDeGt  
to the YeteJtioGoIJEiNewhiJhihaQeYoGeaGYwh  
atiKtheEeKFDttheEeiKGoJEiNetoYeteJt”

Now clearly  $K=s$ . Also ‘YeteJt’ would be ‘detect’ and  
‘YeteJtioG’ would be ‘detection’ So  $Y=d$  and  $J=c$  and  $G=n$

# Mono alphabetic substitution cipher- cryptanalysis

“ what is the FseolhaQinAEainsinoFEZEolession  
iVnowweDD that I haQe it in Ne to NaVeNRnaNelaN  
oFsnoNanDiQesoE has eQeEDiQed who has UEoFA  
ht the saNeaNoFntolstFdR and olnatFEaDtaDent  
to the detectionolcEiNe which i haQe done and what  
is the EesFDttheEe is no cEiNe to detect”

A little inspection of the above text would suggest that :  
F=u, Q=v , A=g and E=r. Also we find many digrams ‘ol’  
which we can safely deduce to be ‘of’ and so l=f.

# Mono alphabetic substitution cipher- cryptanalysis

“ what is the use of having Urains in our Zr of ession  
i VnowweDD that i have it in Ne to NaVeNRnaNefaN  
ous no NanDives or has ever Dived who has Uroug  
ht the saNeaNount of studR and of naturaDtaDent  
to the detection of criNe which i have done and what  
is the resuDtthere is no criNe to detect”

Now it is easy to make the remaining substitutions by just observing the text and we finally get our plain text as follows

# Mono alphabetic substitution cipher- cryptanalysis

“ what is the use of having brains in our profession.  
I know well that I have it in me to make my name  
famous. No man lives, or has ever lived, who has  
brought the same amount of study and of natural  
talent to the detection of crime, which i have done  
And what is the result There is no crime to detect”
